Who is BEST Inc.

BEST is an organization of professional soldering training geeks who focus on training certification, contract rework and repair of PCBAs, and the development and sale of products to improve the speed and reliability of rework and repair operations. Training is a priority at BEST. We specialize in IPC certification for a number of courses for both the operator, as well as the trainer. Our services include the contract rework and repair of PCB assemblies. This contract services group constantly uses and develops products for PCB rework and repair which we then market throughout the world to allow others to rework and repair their products faster and more reliably.

Training-What we deliver

BEST delivers a variety of hand soldering, PCB rework/repair, PCB assembly training and IPC certification classes. BEST is an IPC certification and training center which means you can come to a single source for your IPC trainer and technician level training requirements. In addition to the IPC classes, BEST has built a variety of hands-on PCB assembly, rework and repair classes to meet your needs based on the latest industry standards. BEST can provide guidance and advice on your training program and customize its classes (“How do I solder this?”) to meet your instructional needs as well.

Training-How we deliver

BEST can deliver PCB training and certification needs in a variety of ways. BEST headquartered near Chicago IL offers a professionally-outfitted state-of-the art training center. It comes complete with LCD screens at the workstations and the latest in digital display technology so you can clearly see what the instructor is telling you to do. This professional lab setting is carried out in all of our remote training locations. In addition, BEST can bring equipment to your facility or when appropriate train your personnel in your training area. Finally, BEST has a unique option in its Mobile Training Center (MTC), a training facility on wheels in which the student's can be focused on the training being given without the hassle and cost associated with traveling.

For high quality training and equipment, there is only one that is BEST!

Practical Instruction

Unlike nearly every training center BEST performs contract PCB rework, repair and hand assembly on site. This practical experience means our classroom instructors are knowledgeable on real world manufacturing issues which can then be imparted to the students. For example, in our BGA and QFN/LGA classes, we share experiences that we face in repairing and reworking thousands of those device types.

Experience

BEST instructors have an impressive depth in their teaching backgrounds which is supplemented with industry PCB assembly and test experience. These deep backgrounds allow the instructors to readily connect with the students.

The BEST outfitted classes

BEST prides itself in having state of the art equipment at the solder training centers wherever it provides instruction in order to insure the best solder training experience. Whether it is the MTC, the BEST training center in Rolling Meadows or a remote training site, you will have state of the art equipment allowing the student the greatest chance for success.

Video Tips

BEST has a wide variety of video tips which augment the instruction after you leave. These are short free tools to help the instructor or the soldering tech brush up on their skills after completion of their class.

IPC Specifications

BEST has been actively participating in the formation of the IPC specifications for many years meaning you get the freshest information in your certification classes.

Because we were there when the specifications were written, BEST instructors can give you unique insight to the "whys" of the specifications.

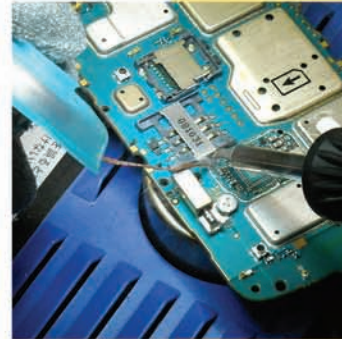

Mobile Training Center

BEST's MTC is the industry's only mobile solder training vehicle. BEST's MTC provides a completely outfitted training location to you. It eliminates the travel costs of training out of town, and since we are outside the factory floor but on-site, we reduce the interruptions and distractions that take place in a company training room.

Space is always a critical issue, as are travel costs for students. BEST has the equipment, space and the ability to travel directly to our sites to provide high quality training.

—Vision Tech

Medical

We spend our time doing what we do best, and let BEST do what they do best.

—Mitsubishi

Industrial

Certification-Types of classes

BEST offers the following IPC solder training, inspection and rework classes at both the CIT and CIS levels including:

- IPC-A-610
- IPC-J-STD-001
- IPC 7711/21
- IPC WHMA-A-620

In addition to these IPC classes, BEST offers a variety of training courses based on its practical experience including, but not limited to:

- SMT
- Advanced SMT
- Mixed Technology Rework
- PCB Assembly
- Leadless Devices
- BGA Rework and Profiling
- SMT Assembly Boot Camp
- Practical Inspection of PWBs

BEST can also consult or build a custom class for you. If you desire an outside set of experienced eyes to look at a solder assembly challenge, define a process working with your engineering staff, and then teach your operators, BEST is that resource for you!

We were really happy with your training and should we or any of our other clients require future soldering training we will definitely contact BEST!

—ATK

The trainer did a great job, he really worked with everyone to ensure that they understood the material.
