- 17 Yellow Series Static Mixing Nozzles** - Bell mouth diameter of 16.7mm

Visit - www.fisnar.com - for questionnaire

Getting Started with Metering and Mixing Equipment

First Complete the Fisnar Questionnaire:

The questionnaire provides critical information on the material and production process. It can be found on-line at www.fisnar.com. A Technical Data Sheet (TDS) should also accompany the questionnaire together with a Material Safety Data Sheet (MSDS). These may be sent via email to info@fisnar.com once the questionnaire is completed. Our engineers will assess your production requirements and refer to these documents to promptly submit a proposal.

TDS and MSDS Documents:

A myriad materials are available from a large selection of resin and adhesive suppliers.

The MSDS is not as useful for technical information as the TDS, but it does provide information regarding health and hazard warnings, together with HAZMAT shipping directions if applicable. The TDS provides technical detail and information on specific gravity, viscosity, gel time etc. The TDS in conjunction with the questionnaire will help determine the system configuration, such as the metering pumps and tanks necessary to keep pace with production cycle requirements.

Don't have a TDS? We'll help track it down.

There is one rule in preparing a proposal for a Metering and Mixing system:

NO ASSUMPTIONS!

The Fisnar questionnaire has been carefully constructed over years of experience - so please take some time to visit our web site www.fisnar.com and use the questionnaire to organize your information and ensure it is exact. If detail is missing or assumed, then it should be found and corrected or brought to the attention of the Fisnar engineer responsible for assisting in the proposal. If information is not available our engineers will help with your process and communicate with the chemical supplier directly.

Assumptions delay a proposal, waste time and will always be costly and degrade performance. Therefore if a questionnaire is completed with an assumption it could be overlooked and become an issue unless it is confirmed or corrected.

Maintenance

It's important to appreciate that any machine will require maintenance and like a car the more you drive the more regular the maintenance. We recommend that seals are replaced on a 6 - 12 month basis and more frequently if systems are operating 24/7. With filled materials maintenance becomes more important and metering pumps may require the replacement of hardened parts from time to time.

Team Work

Proposals are prepared by a collaboration between our valued customers and Fisnar engineers; all Metering and Mixing systems are especially constructed to a unique requirement.

Although all this sounds daunting, we are here to help every step of the way and our machines have been designed, not only to provide ease of use and long life, but also to be modular in concept and customized in an attractive easy-to-maintain finish that industry has come to expect from manufacturers providing an environmentally sound product.

Applications & Process Examples

High Performance Material Bonding

Resin Casting & Coatings

Critical Filter Production

Wind Turbine Blades using Vacuum Techniques

Structural Insulated Glazing

Electronics, Potting & Encapsulation

Stress Tested Gaskets

LC50FR - Ratio 1:1 - 11:1 Low - Medium Viscosity

Analog & Digital Control Models
Shot 1cc - 50cc

Twinflow™

Features

- Cost effective bench mounted system
- Rugged parallel drive system
- Volumetric dispensing
- Gravity feed to metering pumps
- Stainless steel tanks
- Low to medium viscosity dispensing
- Single module design
- Automation integration - digital only
- Disposable static-mixer dispensing

The LC50FR series can be configured to dispense fluids from 1cc to 50cc per cycle, dependent upon mix ratio.

Machines are generally supplied as bench modules but can also be quoted floor mounted with castors.

The materials are fed by stainless steel Teflon® lined hoses to the Twinmixer head mounted on the machine. A remote hand held Twinmixer head can be supplied as an option.

The LC50FR pneumatically powered series is available in analog or digital controlled options. Single acting reciprocating pistons are designed to volumetrically deliver discrete shots of low to medium viscosity or thixotropic two-part fluid. Examples are epoxies, silicones & RTV's, polyurethanes, potting and encapsulation compounds, adhesives, structural bonding materials and acrylics.

Model

LC50FR - Digital Dispense Metering & Mixing System

LC50PFR - Analog Dispense Metering & Mixing System

Specifications

Ratio range:	pre-set 1:1 to 11:1
Mechanism:	parallel drive, positive displacement
Maximum viscosity:	< 500,000 cps
Metering accuracy:	better than $\pm 1\%$
Shot range:	1cc - 50cc at 1:1
Maximum cycle rate:	20 shots per minute
Mixing:	disposable static mixers yellow - see p.17
Tank capacity:	3, 5 & 10 liter stainless steel tanks
Operating pressure:	100 psi 7 bar @ 3 cfm
Controls:	air supply filter regulator and gauge machine on/off, dispense pressure regulator and gauge, foot valve start and emergency stop, Integrated PLC (digital)
Power (Digital):	single phase 110V & 220V
Dimensions (WxDxH):	23.23" x 14.96" x 21.26" (590 x 380 x 540mm)
Weight:	88 lbs. (40 kg)

Accessories Analog & Digital (optional)

- Stainless steel components
- Desiccant air driers
- Remote mixing by Twinmixer head
- Pneumatic agitators
- Nitrogen blanket - max. 3 psi
- Portable cart

Digital Systems Only (optional)

- Low and high level proximity sensors with alarms
- Automation interface to Fisnar robots
- Electric agitators
- Shot counter / repeater
- Thermostatically controlled heating
- Anti-gel purge timer

*Standard configurations may be suitable for *Fast-Track* delivery
- check with local Fisnar office for confirmation

LC120FR - Ratio 1:1 - 18:1 Low - Medium Viscosity

Analog & Digital Control Models
Shot 5cc - 120cc

Features

- Rugged parallel drive system
- Volumetric dispensing
- High mix ratios and differing viscosities
- Gravity feed to metering pumps
- Stainless steel tanks
- Single module design
- Automation integration - digital only
- Digital touch-screen controls
- Disposable static-mixer dispensing

The LC120FR series, available with digital or analog controls, incorporates the latest Fisnar parallel drive system providing controlled flow characteristics during dispensing.

The parallel drive also assists the accurate and consistent processing of materials with either high mix ratios and/or differing viscosities. Single acting reciprocating pistons are designed to volumetrically deliver discrete shots of low to medium viscosity or thixotropic two-part fluid.

Examples are epoxies, silicones & RTV's, polyurethanes, potting and encapsulation compounds, adhesives, structural bonding materials and acrylics.

Accessories Analog & Digital (optional)

- Stainless steel components
- Variable ratio models
- Desiccant air driers
- Remote mixing by Twinmixer head
- Nitrogen blanket - max. 3 psi
- Portable cart

Digital Systems Only (optional)

- Low and high level proximity sensors with alarms
- Automation interface to Fisnar robots
- Electric or pneumatic agitators
- Shot counter / repeater
- Thermostatically controlled heating
- Anti-gel purge timer

Model

LC120FR - Digital Dispense Metering & Mixing System

LC120PFR - Analog Dispense Metering & Mixing System

Specifications

Ratio range:	pre-set 1:1 to 18:1
Mechanism:	parallel drive positive displacement
Maximum viscosity:	<500,000 cps
Metering accuracy:	better than ± 1%
Shot range:	5cc - 120cc at 1:1
Maximum cycle rate:	20 shots per minute
Mixing:	disposable static mixers yellow - see p.17
Tank capacity:	3, 5 & 10 liter stainless steel tanks
Operating pressure:	100 psi 7 bar compressed clean air
Controls:	air supply filter regulator and gauge machine on/off, dispense pressure regulator and gauge, foot valve start and emergency stop, Integrated PLC (digital)
Power (Digital):	single phase 110V or 220V
Dimensions (WxDxH):	30.51" x 16.93" x 21.26" 775 x 430 x 540mm
Weight:	110 lbs. (50 kg)

*Standard configurations may be suitable for *Fast-Track* delivery
- check with local Fisnar office for confirmation

FR300 & FR1200 - Fixed Ratio 1:1 - 20:1

Fixed Analog & Digital Control Models
 Low - High Viscosity
 FR300 Shot 20cc - 300cc
 FR1200 Shot 100cc - 1200cc

Features

- Rugged parallel drive (PLD) system
- Fixed-ratio control
- Volumetric dispensing
- High mix ratios and differing viscosities
- Low - high viscosity range
- Gravity tank feed to metering pumps
- Single module design
- Automation integration
- Digital programming
- Disposable static-mixer dispensing
- Mounted on castors

The FR300 & FR1200 are fixed-ratio systems that incorporate the latest Fisnar Parallel Drive (PLD), providing controlled flow characteristics during dispensing. Machines are available with digital or analog controls.

PLD also assists the accurate and consistent processing of materials with either high mix ratios and/or differing viscosities. Single acting reciprocating pistons are designed to volumetrically deliver discrete shots of low to high viscosity or thixotropic two-part fluid. Examples are epoxies, silicones & RTV's, polyurethanes, potting and encapsulation compounds, adhesives, structural bonding materials and acrylics.

MINI - Variable-Ratio 1:1 - 20:1 Low - Medium Viscosity

Pneumatic Control Shot 1cc - 20cc

Features

- Variable-ratio control
- Volumetric dispensing
- Low to medium viscosity
- Gravity tank feed with pull-through piston
- Stainless steel tanks with moisture traps
- Stainless steel metering pumps and components
- Single module design
- Automation integration
- Low maintenance construction
- Disposable static-mixer dispensing

The Mini variable-ratio system is designed to allow easy adjustment of a mix-ratio to suit one or more applications requiring more than one material. Mechanically linked positive displacement metering pumps provide a precise dispensing ranging from 1cc to 20cc with a maximum viscosity of 100,000cps.

The Mini is a free-standing pneumatic driven bench mounted system with foot pedal actuation. Its compact size and small footprint provides for close interaction with the work, enabling a cleaner, safer working environment. Machines are available with analog controls. Electrical accessories are also available as added options (requires extra cabinet).

Dimensions (WxDxH):	dependent on machine specification
Weight:	dependent on machine specification

Accessories Analog (optional)

- Stainless steel components
- Desiccant air driers
- Remote mixing by Twinmixer head
- Cartridge feeds
- Nitrogen blanket - max. 3 psi

MICRO - Variable-Ratio 1:1 - 32:1 Low - Med Viscosity

Analog Control Shot 0.04cc - 20cc

*Unit shown with optional agitator

Features

- Positively dispensed small beads and dots
- Variable-ratio
- Low to medium viscosity
- Gravity tank feed to metering pumps
- Single module design
- Automation integration
- Low maintenance construction
- Disposable static-mixer dispensing

The MICRO is designed to dispense continuous small beads of homogeneously mixed two-part fluids. Mechanically linked positive displacement metering pumps provide precise dispensing ranging from 0.04cc to 20cc. Machines are available with digital or analog controls.

The Micro is a free standing pneumatically driven bench top machine with foot pedal actuation. The systems variable-ratio design accommodates an extensive range of ratio requirements. Electrical accessories are also available as added options.

Accessories Analog & Digital (optional)

- Stainless steel components
- Bulk feed arrangements
- Desiccant air driers
- Remote mixing by Twinmixer head
- Cartridge feeds
- Vacuum degassing
- Nitrogen blanket - max. 3 psi
- Rod pumps for smaller shot sizes

Digital Systems Only (optional)

- Low and high level proximity sensors with alarms
- Automation interface to Fisnar robots
- Electric or pneumatic tank agitators
- Shot counter / repeater
- Thermostatically controlled heating
- Anti-gel purge timer

DFR20 & DFR200 - 1:1- 13:1 Pail Pump Units

Digital or Analog - High Viscosity
 20 liter / 5 gal. - Shot 15cc - 100cc
 200 liter / 55 gal. - Shot 15cc - 300cc

Features

- Thixotropic & high viscosity pastes & fluids
- Volumetric dispensing up to 1,000,000 cps
- High output up to 15 shots per minute
- Analog speed control
- Pneumatic system
- Compact arrangement
- Ideal for automatic assembly lines
- Disposable static-mixer dispensing
- Mounted on castors

Machines are designed for metering & mixing a high viscosity base fluid up to 1 million cps directly from either 5 gallon pail (20 liters) or 55 gallon (200 liters) drums with the activator fed from a stainless steel tank. Alternatively machines can be configured with a second 5 gallon or 55 gallon pail pump for a high viscosity activator supplied in a 5 gallon pail or 55 gallon drum.

Other options allow the series to be customized either with a fluid purge and/or a boom for ergonomic handling of the hose and dispensing Twinmixer head.

Specifications

Ratio range:	pre-set volumetric 1:1 to 13:1
Metering pumps:	in-line single acting positive displacement

DXE2 - Ratio 1:1 - 50:1 Medium Flow Rate - Low Pressure

Up to 2 liters a minute at 1:1 & 2000 cps

Features

- Low pressure
- Volumetric dispensing up to 20,000 cps (pressure fed)
- Output up to 2 liters a minute
- Precision long life gear pumps
- Analog speed control
- Single phase
- Compact bench mounted
- Ideal for automatic assembly lines
- Disposable static-mixer dispensing
- Variable-ratio machine enables programmable ratio

Gear pump systems are designed for lower viscosities and higher volumes. They are also suited for automatic assembly lines. The two components enter into precision gears that can accurately meter the flow and therefore the volume of the fluid. A mixing nozzle finally mixes the materials.

Suitable for casting either small intricate moldings using RIM technology or applying uninterrupted beads for structural bonding or gasket forming. The DXE2 provides a reliable solution to many dispensing requirements.

Model

DXE2

Low Pressure Metering & Mixing System

Specifications

Ratio range:	volumetric 1:1 to 100:1
Metering pumps:	inverter controlled precision flow gear pumps with non return valve and overpressure switch
Maximum viscosity:	20,000 cps - requires pressure feed
Metering accuracy:	better than $\pm 1\%$
Maximum shot output:	2 liters a minute at 1:1 up to 2000 cps
Maximum cycle rate:	20 shots per minute
Mixing:	disposable static mixers yellow - see p.17
Tank capacity:	5 & 10 liter stainless steel tanks
Controls:	dispense speed control via panel mounted dial
Services:	single phase 110V or 220V compressed air
Dimensions (WxDxH):	dependent on machine specification
Weight:	dependent on machine specification

Accessories (optional)

- Bulk feed transfer, pumps and holding tanks
- Programmable mix ratio setting
- Automation interface to Fisnar robot
- Rotary/static Twinmixer head
- 20 liter stainless steel tanks
- Nitrogen blanket
- Low & high level proximity sensors with alarms
- Electric or pneumatic tank agitators
- Vacuum degassing
- Shot counter / repeater
- Thermostatically controlled heating, tanks & hoses
- Anti-gel purge timer
- Portable cart
- Dynamic mixing head
- Closed-loop flow monitoring control

DXE60 - Ratio 1:1 - 100:1 High Flow Rate - Low Pressure

Up to 60 liters a minute at 1:1 & 2000 cps

As Supplied for Wind Energy Resin-Infusion

Features

- Low pressure
- Volumetric dispensing up to 20,000 cps (pressure fed)
- HMI touch screen control
- High output up to 60 liters a minute
- Precision long life gear pumps
- Digital programmable flow rate and volume setting
- Variable-ratio machine enables programmable ratio
- Single phase operation
- Mounted on castors
- Ideal for automatic assembly lines
- Disposable static-mixer dispensing

A highly accurate, technically advanced and versatile low pressure metering & mixing system. Designed for high output with variable-ratio metering.

Machine versions offer programmable flow rate and dispense volume settings also incorporating programmable mix ratio adjustment.

The on-board HMI touch screen can also accommodate close loop monitoring.

Model

DXE60

Low Pressure Metering & Mixing System

Specifications

Ratio range:	volumetric 1:1 to 100:1
Metering Pumps:	inverter controlled precision flow gear pumps with non return valve and overpressure switch
Maximum viscosity:	20,000 cps - requires pressure feed
Metering accuracy:	better than $\pm 1\%$
Maximum output:	60 liters a minute at 1:1 mix ratio
Mixing:	disposable static mixers yellow - see p.17 - air driven rotary static mixer - dynamic mixing
Tank capacity:	25 - 300 liter tanks - bulk feed
Controls:	HMI touch screen interface with programmable flow-rate and/or dispense volume adjustment, programmable mix ratio adjustment
Services:	single phase 110V or 220V compressed air 100 psi 7 bar
Dimensions (WxDxH):	dependent on machine specification
Weight:	dependent on machine specification

Accessories (optional)

- Bulk feed transfer, pumps and holding tanks
- Automation interface to Fisnar robots
- Rotary/static Twinmixer head
- Dynamic mixing head
- 25 - 300 liter stainless steel tanks
- Nitrogen blanket
- Low & high level proximity sensors with alarms
- Electric or pneumatic tank agitators
- Vacuum degassing
- Shot counter / repeater
- Thermostatically controlled heating, tanks & hoses
- Anti-gel purge timer
- Machine mounted mixing head with foot pedal control
- Closed-loop flow monitoring control

PF-MINI - Ratio 1:1 - 20:1 High Shot Rate - Low Pressure

30cc per second at 1:1 & 2000 cps

Features

- Low pressure standard adjustable ratio 1:1 - 10:1
- Volumetric low - medium viscosity dispensing
- High flow output
- Adjustable shot rate 1cc - 30cc a second
- Precision long life gear pumps
- Digital speed and timer control
- Auto-cleaning agent purge system includes 10 liter tank
- Single phase
- Compact floor mounted
- Disposable static-mixer dispensing
- Variable-ratio machine enables programmable ratio

An adjustable-ratio precision gear-pump metering & mixing system with built-in microprocessor control. The Model PF-MINI includes a control panel for easy programming of metering, mixing and dispensing functions. Warning LED's

signal when a control function is not compliant. A two stage auto-cleaning feature efficiently purges the mixer by the combined action of a cleaning agent and air pressure.

Model

PF-MINI

Low Pressure Metering & Mixing System

Specifications

Ratio range:	volumetric 1:1 to 10:1 standard system
Metering pumps:	inverter controlled precision flow gear pumps with non return valve and overpressure switch
Hoses:	Stainless steel braided Teflon® lined hose to mixing head
Viscosity range:	50cps - 200,000cps* (*requires heating option)
Metering accuracy:	mix better than $\pm 1\%$, shot 3%
Adjustable cycle rate:	1cc/sec - 30cc/sec at 1:1 and 2000 cps
Mixing:	disposable static mixers yellow - see p.17
Auto anti-gel shot timer:	digital set-up according to pot-life of resin
A/B fluid & cleaning tank capacity:	10 liter stainless steel 304 tanks sight-level tube
Controls:	digital control micro processor and timer Mitsubishi PLC logic
Services:	single phase 220V, 60Hz. Filter & regulator for compressed air 60psi > 4kgf/cm
Dimensions (WxDxH):	27.56" x 25.59" x 53.15" 700 x 650 x 1350mm
Weight:	dependent on machine specification

Accessories (Optional)

- Bulk feed transfer, pumps and holding tanks
- Ratios greater than 10:1 up to 20:1
- Tank sizes 30 & 50 liters
- Teflon® lined hoses to Twinmixer head
- Automation interface to Fisnar robot
- Rotary/static and dynamic mixing heads
- Nitrogen blanket
- Low & high level proximity sensors with alarms
- Electric or pneumatic tank agitators
- Vacuum degassing
- Shot counter / repeater
- Thermostatically controlled heating, tanks & hoses

IJ400 Series - Severe Duty - Valveless Progressive Cavity

Abrasive & Shear Sensitive Media

The IJ400 is a series of progressive cavity, severe-duty, valveless metering & mixing system models that provide accurate and repeatable volumetric dispensing over a wide spectrum of viscosities.

Abrasive filler materials are conveyed by a gentle endless progressive pump action that ensures long life of rotor-stator elements and reduces service down time.

IJ400PB - A bench mounted system that includes a mixing head with integrated dispensers and a PLC dispensing control for both resin and activator. Cartridge mountings are fitted as standard, optional bulk feeding is offered.

IJ400PR - A lightweight designed metering & mixing system designed to mount directly on a Fisnar robot or integrated to other automated assembly systems. The components are fed from the pumps directly into the static-mixer, providing a constant on-ratio condition, exact dispensing and a fast shot or bead sequencing.

IJ400PC - A compact table top unit for casting low to medium viscosity media.

IJ400PM - A mobile system suitable for casting of low to medium viscosity media. The valve mixing head is equipped with a handle and start button to initiate the dispensing sequence.

IJ400PC

IJ400PM

IJ400PB

IJ400PR

Features

- Rotating positive displacement pump
- Volumetric fluid conveyance
- High viscosity abrasive adhesives and sealants
- Solid content pastes and shear sensitive media
- Snuff-back to prevent drip
- Linear pump pressure
- Repeatable accuracy better than 1% at pump outlet
- FDA compliant wetted components
- Hot & cold material dispensing
- Pulse free
- Adjustable shot output
- Valveless dispensing
- Electronic operation

Accessories (optional)

- Bulk feed arrangement, pumps and holding tanks
- Automation interface to Fisnar robot
- Remote mixing by hose-fed mixing head
- Low & high level proximity sensors with alarms
- Tank agitators
- Vacuum degassing
- Shot counter / repeater
- Thermostatically controlled heating

Model

IJ400PB	Progressive Cavity Bench System
IJ400PR	Progressive Cavity Robot System
IJ400PC	Progressive Cavity Bench Cast System
IJ400PM	Progressive Cavity Mobile Cast System

Specifications

Ratio range:	pre-set 1:1 to 20:1
Mechanism:	progressive cavity positive displacement
Maximum viscosity:	1,000,000 cps
Metering accuracy:	better than $\pm 1\%$
Shot range:	0.04cc - continuous ratio dependent
Maximum cycle rate:	30 shots per minute
Mixing:	disposable static mixers yellow - see p.17
Tank capacity:	5, 7, 20 and 50 liters
Operating pressure:	low pressure
Controls:	electronic
Power:	single phase 110V or 220V

Custom Design Capability

The following are a few examples of special projects. Should an application require special engineering, please contact your local Fisnar office to talk with an experienced engineer.

Automated Robot Systems

Example: Automated robot metering & mixing systems using low pressure gear-pump or high pressure piston-pump technology.

Filter Production

Custom automated production lines for filter bonding and assembly.

Turbine Blade Fabrication

Automated low pressure vacuum-draw metering & mixing molding systems for wind energy industry.

Glazing

Automated window sealing production and assembly.

Vacuum Chamber Dispensing

Integrated Systems

Mixing Nozzles - Accessories & Rotary Nozzles

Static-Mixers 0.657”(16.7mm) yellow & 0.625”(15.9mm) blue

A complete line of static-mixing nozzles for metering and mixing equipment is featured on pages 16 & 17. Static-mixing nozzles are available in two inside-diameter sizes of bell-mouth:

0.657” (16.7mm) 167 (yellow)

0.625” (15.9mm) 159 (blue)

The bell-mouth is the material entry end of the nozzle and the part that fits over the machine exit manifold. Static-mixing elements inside the body of the nozzle are manufactured from high grade polyacetal to withstand the higher pressures of metering and mixing machines; static-mixer housings are polypropylene.

Luer-lock static-mixers are also available for fine bead applications using luer-lock tips; note part numbers with an “LL” suffix.

Nozzle Retaining Nuts

Part Number	Pk Qty.	Description
UM08-PA	10	Nut beige for I.D. 5-8mm
UM10-PA	10	Nut beige for I.D. 10mm
UM13-PA	10	Nut beige for I.D. 13mm

Luer-lock Adapters

Part Number	Pk Qty.	Color	Mixer Type
LA05-00	10	White	5mm
LA06-08	10	Grey	6 & 8mm
LA10-00	10	Black	10mm

Rotary-Static Nozzles Green

Part Number	Pk Qty.	Length (inches)	Length (mm)	Inside Diam. (inch)	Inside Diam. (mm)	Outside Diam. (inch)	Outside Diam. (mm)	Number of Elements
MR06-12	10	4.39	111.5	0.250	6.35	0.394	10.00	12
MR08-12	10	5.12	130.0	0.315	8.00	0.475	12.00	12
MR10-12	10	6.10	115.0	0.394	10.00	0.551	14.00	12
